

ELVA Visual AI

Transforming Vision into Intelligence

DETECT • VERIFY • OPTIMIZE • SECURE

What is ELVA?

How It Works

- Ingest: 4K/AI IoT cameras, microscopes, and production line cameras.
- Understand: AI models for OCR, detection, anomaly spotting and classification.
- Act: Real-time alerts, dashboards, audit trails and automation workflows.
- Integrate: ERP, POS, RFID, barcode systems and access control.

Key Differentiators

- Jewellery-specific AI datasets and pre-trained models.
- Micron-level defect and inclusion detection.
- Enterprise-grade audit and security controls.
- Hybrid deployment with edge + cloud architecture.

Industry Challenges We Solve

Jewellery Retail

- Shrinkage and pilferage detection.
- Counter crowd monitoring and staff analytics.
- Stock mismatch and display inconsistencies.
- Customer service and operational visibility.

Manufacturing Plants

- Micro-defect and quality inspection.
- Packing and dispatch verification.
- Safety and PPE compliance monitoring.
- Traceability and production analytics.

AI-Driven Security • Operational Visibility • Process Automation • Compliance Intelligence

Visual AI Use Cases Retail Industry - Challenges

Store Intelligence

- Customer footfall analytics
- Counter-wise crowd analysis
- Salesperson activity tracking
- Suspicious behaviour detection
- Queue and wait-time monitoring

Business Impact

- Reduced operational losses
- Improved customer engagement
- Optimized staff productivity
- Enhanced compliance visibility

AI-Driven Security • Operational Visibility • Process Automation • Compliance Intelligence

Visual AI Use Cases Manufacturing Industry - Challenges

Factory Intelligence

- AI-based PDI inspection
- OCR & barcode verification
- Surface defect detection
- Packing line validation
- Worker safety compliance

Operational Benefits

- Reduced rework and wastage
- Higher quality consistency
- Automated inspection workflows
- Improved production visibility

AI-Driven Security • Operational Visibility • Process Automation • Compliance Intelligence

Advanced AI Capabilities

Core Technologies

- Computer Vision
- Object Detection
- OCR & Text Analytics
- Behavioural AI
- Predictive Intelligence

Enterprise Integration

- ERP & BI integration
- Centralized AI dashboards
- Cloud & edge deployment
- Multi-location monitoring

AI-Driven Security • Operational Visibility • Process Automation • Compliance Intelligence

Successfully Delivered Projects

Core Use Cases

- AI-based retail intelligence platform.
- People counting & behavior analytics.
- Intrusion detection systems.
- Smart surveillance with automated alerts.
- Planogram compliance analytics.
- Workplace safety monitoring.
- PDI Monitoring.

Clients

Senco Gold Limited.

Dhunseri Polyfilms Pvt. Limited.

Gibraltar Airsprings.

Common Use Cases Detections
